

ODP 193-77
4 March 1977

MEMORANDUM FOR: Deputy Director for Administration
FROM : Clifford S. May, Jr.
Director of Data Processing
SUBJECT : ODP Report for Week Ending 4 March 1977

Communications Requirements

Office of Data Processing communications requirements for FY 1979-1983 were forwarded to Office of Communications.

National Photographic Interpretation Center Request for Coordination

Office of Data Processing received a request to coordinate on the NPIC purchase of 114 Delta Data terminals.

Security Briefing

The ODP Security Officer attended a briefing given by IBM on multi-level secure processing capability. IBM prepared the briefing as a result of an RFP from the Air Force for the SATIN/IV System. The system might contain some capabilities that could be integrated into the OAPL System.

Support to Office of Strategic Research

FUSE - Manipulation of U.S. defense program expenditures and order-of-battle data covering 17 year periods. The Five Year defense Plan for 1977 (FYDP77) tapes which were received from the Department of Defense, have been processed to create input for the US/USSR defense expenditures comparison.

Support to Office of Finance

GAS - General Accounting System. A new daily job stream has been initiated. This has reduced the elapsed time by 25% (4 hours to 3 hours) and has caused jobs to get in and out of the system much quicker.

All General Ledger file discrepancies that existed at time of conversion have been corrected.

We met with the Deputy Director of Finance and discussed discrepancies in report figures. We know the scope of the problem and have added resources to the GAS team to solve it as soon as possible.

FBS - Financial Resource System. We continued our support of the FY-79 Program Budget exercise with the preparation of Budget input menus and the beginning of on-line data entry by Agency Budget Officers on 1 March as planned. Initial reports for the Program exercise will be produced on 18 March. Additional reports are planned for production as required, with final reports scheduled for 9 May.

CAMS

The CAMS software release originally scheduled for 28 February was delivered on 3 March. CAMS will now fully support SAFES mission tasking.

SAFE

Progress on SAFE system development has been delayed by the need to address issues and questions generated within the Agency and Intelligence Community. However, two significant events occurred this week that should get us moving forward again.

First, during a meeting of the JDA, DDI, and DDS&T on 3 March, a decision was made to modify the SAFE development approach. Rather than the SAFE Project Office in DSP acting as system design and integration contractor, an outside contractor will be selected competitively to do the job.

Second, a draft of the ADISS/SAFE Coordination Management plan was completed. It is being circulated within DIA and CIA for staff review and comments.

ADSE

STATINTL ODP personnel are attending the ADSE monthly progress meeting at [REDACTED] California. The office space layout for the [REDACTED] staff personnel who will be located in the Ames Building was sent to [REDACTED] or their review. STATINTL

RAPID

During an inspection visit to the contractor's site 22-25 February, several sub-system design documents were reviewed and modifications agreed to by Project Management.

The contractor was asked for a proposal dealing with the implementation of the [REDACTED] ODP suggested solution to the message integrity question. The proposal is expected approximately 12 March 1977. STATSPEC

ADSTAR

We have completed the review of the ODP Requirements Paper and have identified some minor differences that will have to be reflected in the procurement document.

Training

STATINTL

A three day Basic III course was completed by 21 students.
